RESEARCH INTERESTS

I am broadly interested in the general area of **efficient machine learning**, aiming to understand the statistical structures of modern machine learning algorithms and apply these insights to real-world computational challenges.

I especially focus on **non-parametric models** and neural networks with intensive matrix operations, such as **transformers** (language models) and graph neural networks (**GNNs**).

INDUSTRY EXPERIENCES

Microsoft, Washington, United States   May 2022 – Aug 2022
Research Intern — Mentor: Ritchie Zhao, Bita Darvish Rouhani
Study the compression of Mixture-of-Experts Transformers. We reconstruct expert MLPs through optimal transport. The work here motivates the follow-up project [3], published at ICML 2023.

Amazon, California, United States   Aug 2021 – Dec 2021
Applied Scientist Intern — Mentor: Di Jin, Dilek Hakkani-Tur
Do research on parameter-efficient fine-tuning, with [5], [7] accepted to EMNLP 2022 Oral, NAACL 2022 Findings respectively. We explore the connection between attention and kernel estimators to guide the parameter assignments in adapters.
